

# Name tag challenge

**Lesson complexity:** Beginner

**Grades:** Kindergarten and up

**Subjects:** Any

**Created by:** Michael Leonard, CoSpaces Edu Ambassador

## Introduction:

Let your students design their very own VR name tag in a way that represents them! You can use this to set up a class challenge or simply as a regular classroom activity. At the end of this activity, ask students to share their personal name tags. This is a great way to help your students get to know a little more about their classmates as they start a new and exciting school year filled with exploring, creating, and learning.

## Benefits:

- Nice ice breaker at the beginning of the school year
- Help students introduce themselves and get to know each other
- Encourage creativity and self knowledge

## Activity example:

1. Let your students individually create their own VR name tag in CoSpaces Edu, using any features, objects and external files they see fit in order to create a virtual world that introduces who they are and represents their interests.
2. You can give a 40-minutes time limit to turn this activity into a challenge.
3. If your students have enough time, they can go one step further and make their name tag interactive by coding some of the images in their virtual reality world. You could also use this as an additional separate activity.
4. As another addition to this activity, you could also have your students record their own voices and add this as a background sound for their space.
5. Ask students to share or present their personal name tags to the class and discuss the images they decided to incorporate into their virtual reality worlds.
