Student data safety

How we keep your students’ data safe

- We use SSL security for safe transmission of your data and AES-256-GCM for data at rest.
- Passwords are salted and hashed using PBKDF2.
- We do routine security audits and monitoring to ensure security and system integrity.
- Your user data is stored and backed up in geographically distributed servers operated by industry leading partners. Multiple distributed servers also ensure highest possible levels of uptime and restorations in a timely manner.
- Access to your personally identifiable information is restricted to specific employees only.
- All employees undergo a background check and sign a non-disclosure agreement before beginning their employment with us.
- Employees lose access to all company and product systems and data when terminated.
- We comply with GDPR requirements and are currently undergoing an audit and certification for this.
